

William Heeb

Software Engineer

SUMMARY

Innovative and detail-focused software engineer with a keen passion for AI. Demonstrated success in developing and deploying effective front and back-end web applications. Eager to contribute my skills to a tech powerhouse with a global footprint. I Discovered my passion for coding five years ago while testing software builds, and since then, I've been dedicated to pursuing a career in software engineering.

Lead Software Engineer for Command Center

February 2024- present

- Fully functional web3 wallet integration Optimizing hashed security(saving over 15k for my client).
- Actively archiving all protocols across EVM chains. Storing all onchain events to efficiently parse data.
- Safely navigating a code base through unit testing to ensure customer safety..
- One-click deposit solutions with all staking options chain agnostic to appeal to non tech participants.

Software Engineer at Degen Coincrete

March 2022 — Present

- Collaborated with the client to build their vision of a responsive web3 website driving 22% more traffic to their digital brand.
- Changed strategies on the tech stack often to maintain the highest level of Security while thinking about accessibility. Saving 35k on audits.
- Utilized private RPC endpoints while incorporating custom API's.

Software Engineer at EAS(experience as a service) United States

March 2021 –Present

- Collaborated with a team of developers to build modern and responsive web applications using best practices while optimizing space and time..
- Built semantically structured full-stack web applications. Automated tests to save 75% space, while rendering the page as fast as possible for both customers and highlighted forward-facing business professionals.
- A route for business professionals to change their pricing and highlight their offered services on our website driving on average 60% more traffic.
- Applied agile methodologies like SCRUM for project management for all CRUD apps.

Lead Mentor Tech for 45 technicians and beta app tester for Sears Home Service

February 2016 — Present

- Training our AI implementation daily while relaying issues in responses.
- Testing weekly routing app before we release it to all 3,000 techs nationwide.
- Mentoring my team of technicians daily with helpful diagnostic steps while completing my service route.
- Performing electrical tests(finding where the failure is with voltage verification at test points.
- Holding my team accountable and holding them to a standard of professionalism that we have curated in my territory. (top 5 teams in the country in all categories driving \$250,000 quarterly profit from previously no profit before I became LMT)

Volunteering: 1WP LLC London, UK + Opensource projects 🙌
